# Top UI/UX healthcare features today
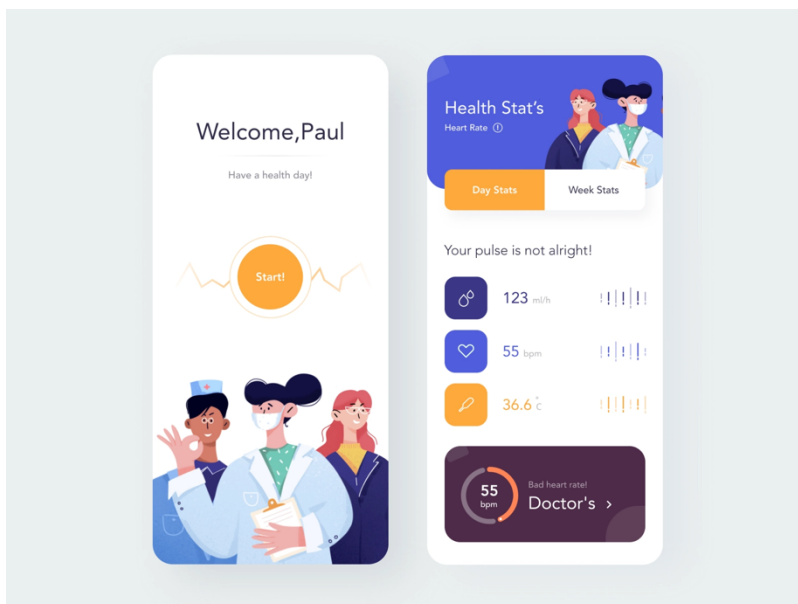

1. Empathetic onboarding

(Source: [Dribble](#))

Every healthcare app should have a clear pathway through key tasks. We love how this example has clear "Next" buttons to show you the way, as well as arrows for more info.
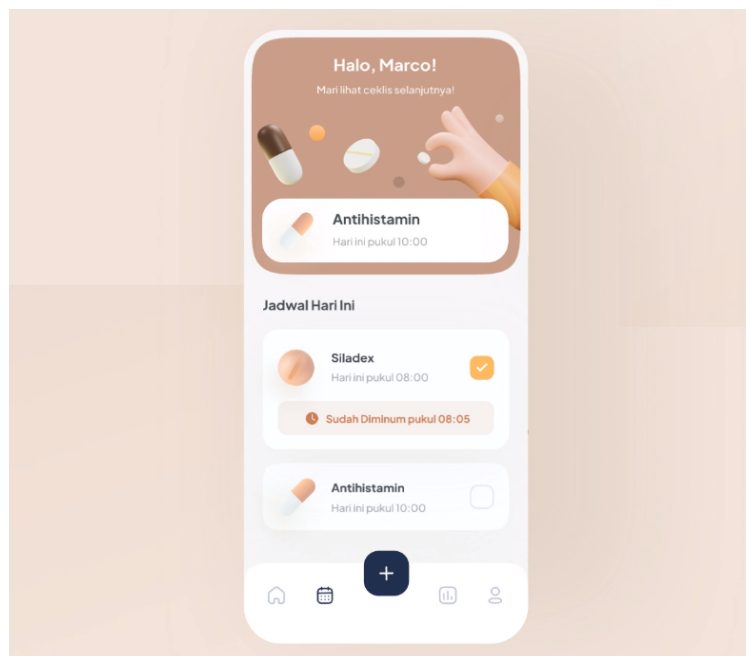

2. Calming user interface

(Source: [Dribble](#))

Healthcare is stressful enough, so the design should be calming. This example displays professional yet relaxing colors. There's plenty of minimalist white space for breathing room, too.
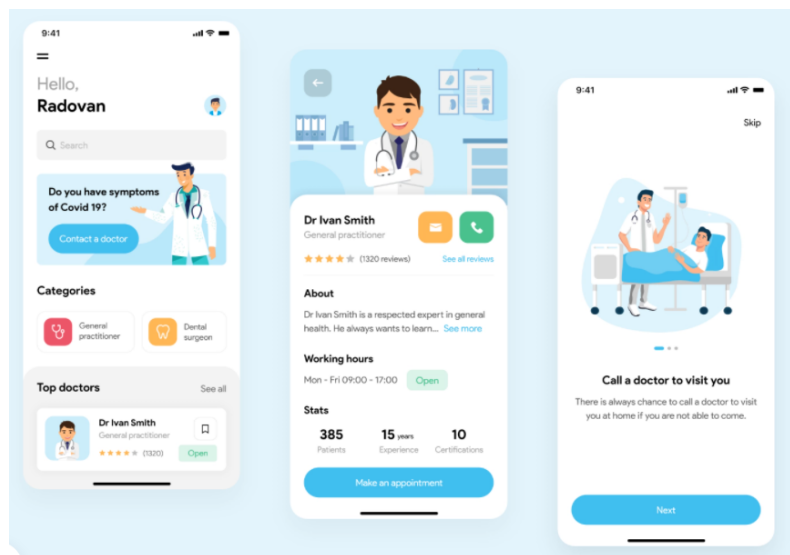

2. User-friendly navigation

(Source: [Dribble](#))

Having a bottom bar with icons is an excellent way to organize a user-friendly menu. This example has a great navigational bar that makes it easy to get around. It also follows the 3-click rule, letting you access all features within just a few taps.

3. Customized call-to-actions

(Source: [Dribble](#))

Finally, this healthcare app is designed with suggested tasks in mind. Every area has a call-to-action, such as making an appointment, viewing all doctors, etc. Ideally, healthcare apps should also make it easy to give feedback and get ongoing support from the app itself.
